Steps to add Usife Extension.

1. Start OpenOffice.org Presentation.

2. Go to Tools->Extension Manager and add UsifeNew.oxt (Don't change filename).

3. Restart OpenOffice.

4. Now you should see a new option "UsifeOptions" on the top bar.

5. Two new buttons "Encrypt current page" and "Decrypt pages" should be visible now.

6. Create a Presentation and click on "Encrypt current page" to encrypt contents of the current slide(If the buttons are not clickable restart the OpenOffice once).It will ask you your privilege level. Select any of the available levels and enter a key.Make sure you remember the key.

7. Now you should see slide contents getting encrypted.

8. To decrypt click "Decrypt pages" and select the same privilege level you selected in step 6.It will again ask you for the key and enter the same key. Please note that extension doesn't save the key anywhere, so even if you enter the wrong key while decrypting it won't complain.

9. You can change your privilege level by going to the "UsiFeOptions" on the top. You can also customize your privilege levels there.
